PS4 | THE FORGOTTEN PRESCRIPTION

MedTrace

Medication continuity and safe handover across every visit

SATURDAY

GP CLINIC

Metformin 500 mg

HOSPITAL

Metformin 850 mg

!

PHARMACY

Metformin, dose unclear

One drug, three versions

A patient moves from GP to hospital to pharmacy. Each keeps its own list.

GP CLINIC | 12 JAN

Metformin

500 mg, twice daily

HOSPITAL DISCHARGE | 3 MAR

Metformin

850 mg, twice daily

PHARMACY | 20 MAR

Metformin

500 mg, frequency missing

Which one is current? Nobody can tell, and the patient carries the risk.

Flag, never decide

Preserve the source

Every value stays linked to the document it came from. Original wording is never edited.

Surface the differences

Visits are compared side by side: names, strengths, instructions and dates.

Route to a professional

Unresolved conflicts go to a pharmacist or clinician queue. Professionals decide.

How it works

STEP 1

Extract

Prescription or discharge summary in, structured fields out.

STEP 2

Compare

Medicines aligned across visits by name, strength, instruction and date.

STEP 3

Flag

Conflicts, gaps and outdated entries are marked, not fixed.

STEP 4

Review

Pharmacist or clinician approves, rejects or annotates.

STEP 5

Share

Patient sees verified instructions with the original text intact.

Rules do the flagging. AI only extracts and explains, and never resolves.

Demo: one patient, three visits

Medicine	GP (12 Jan)	Hospital (3 Mar)	Pharmacy (20 Mar)	Flag
Metformin	500 mg, twice daily	**850 mg, twice daily**	500 mg, twice daily	**CONFLICT**
Amlodipine	5 mg, once daily	**Not listed**	5 mg, once daily	**MISSING ENTRY**
Amoxicillin	500 mg, 7-day course	Not listed	**Still shown as active**	**OUTDATED**
Atorvastatin	20 mg at night	20 mg at night	20 mg at night	**CONSISTENT**

Synthetic data. Flags are for professional review and are never clinical decisions.

Step 1: The review queue

●	**Metformin strength conflict** GP 500 mg, hospital 850 mg, pharmacy 500 mg	HIGH	OPEN
●	**Amlodipine missing at discharge** Listed by GP and pharmacy, not by hospital	MEDIUM	OPEN
●	**Amoxicillin possibly outdated** Course ended 19 Jan, still active at pharmacy	MEDIUM	OPEN
●	**Ramipril frequency not recorded** Missing in hospital discharge summary	MEDIUM	OPEN

Every flag shows its sources side by side. The system flags; it does not choose.

Steps 2 & 3: Review and patient view

PHARMACIST VIEW | BEFORE — OPEN

Metformin: strength conflict

GP: *"Metformin 500mg tab, 1 BD after food"*
Hospital: *"Tab Metformin 850 mg BD"*
Pharmacy: *"GLUCOPHAGE 500MG TABS - 1 BD"*

Verify 500 mg | Verify 850 mg | Send for review

PHARMACIST VIEW | AFTER — RESOLVED

Verified "500 mg" from the GP record

Decided by R. Iyer, pharmacist

Note: confirmed with the prescriber

Logged in the audit trail

PATIENT VIEW | BEFORE REVIEW

Metformin

AWAITING PHARMACIST REVIEW

Your records differ, so this has not been verified yet. Please ask your pharmacist or doctor.

PATIENT VIEW | AFTER REVIEW

Metformin

VERIFIED BY R. IYER, PHARMACIST

Original instruction (unchanged): *"Metformin 500mg tab, 1 BD after food"*

In plain words: 500 mg, twice daily.

The original text is never rewritten. Plain words are an addition beside it.

Four kinds of flags

Conflict

HIGH SEVERITY

Same medicine, different strength, dose or frequency across sources.

Missing

MEDIUM SEVERITY

A field is blank, or a medicine vanishes between visits.

Outdated

MEDIUM SEVERITY

A course has ended or a list is stale, yet it still shows as active.

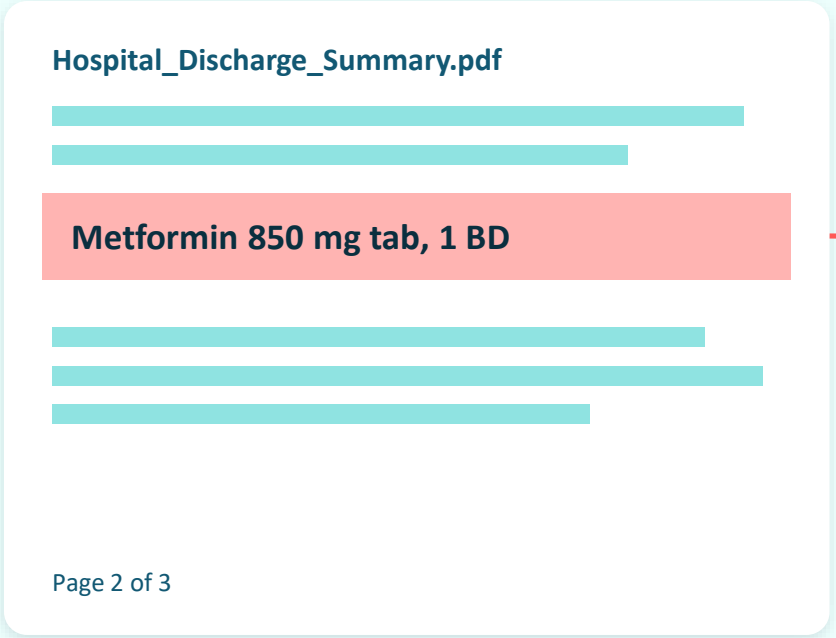

Name variant

LOW SEVERITY

Brand and generic names are matched, such as Glucophage and metformin, and shown for confirmation.

Every value has a source

MEDICINE
Metformin Source: p.2, line 14

STRENGTH
850 mg Source: p.2, line 14

FREQUENCY
1 BD (twice daily) Source: p.2, line 14

Click any value to open the original document at the exact snippet.

Review queue and audit trail

Metformin strength conflict
GP 500 mg vs hospital 850 mg
OPEN

Amlodipine missing at discharge
Listed by GP and pharmacy only
IN REVIEW

Amoxicillin possibly outdated
7-day course, still shown active
RESOLVED

Audit history

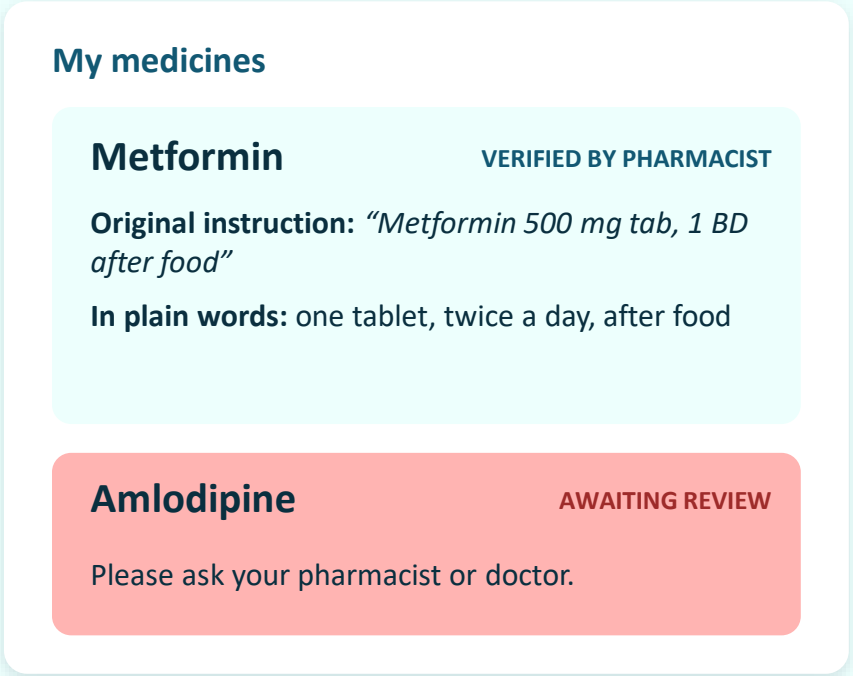

10:02 Rule engine flagged conflict

10:15 Pharmacist opened the item

10:21 Approved GP value, with note

Append-only log of who, what, when and why. Hash-chained to show tampering.

What the patient sees

Original text always shown

The source instruction is never rewritten.

Plain words are an addition

Simple language sits beside the original, not over it.

Unverified means pending

Unresolved items are marked, never guessed.

Thank you.
